

IN THE SPECIFICATION

Please amend the paragraph at page 8, line 24 to page 9, line 3 as follows:

- a sufficient number of LEDs to obtain the intended light effect glued onto said zone without a conductive layer, the anode ends of each diode being in contact with one of the two zones of the conductive layer and the cathode sides of each diode being in contact with the other zone of the conductive layer; each of the two zones themselves being connected to an electrode (see, for example, electrodes 7 connected to conductor tracks 6a, 6b, 6c, 6d in Figs. 1-6, noting that the position and arrangement of the electrodes is merely exemplary and is not intended to indicate an exact or preferred placement);
